**DETAILED ACTION**

1. This action is responsive to communications filed on 10/30/2003
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, 10-13, 19-40, and 49-52, are drawn to a resource server, classified in class 709, subclass 228.
  - II. Claims 6-9, 14-18, 41-48, are drawn to monitoring servers on a network, classified in class 709, subclass 224.
3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case subcombination II has separate utility such as in managing a networked group of servers. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
